### Video conferencing and Telehealth Solution

---

#### Sheppard Pratt Health System

Sheppard Pratt, a private psychiatric system, worked with System Source to install video conferencing equipment facilitating professional education, shared instructional resources and telepsychiatry initiatives. PowerPoint and other content can be displayed during the video conference using Polycom's Visual Concert.

A Polycom video conferencing system was installed in the conference center auditorium. Thirteen Polycom systems were installed in racks and custom mobile cabinets across Maryland. Each system connects via ISDN or IP. The systems are centrally managed by a networked bridge. The bridge manages:

- Scheduling
- Multipoint conferencing
- IP and ISDN protocol
- Usage reporting
- Continuous availability
- Speed arbitration for multiple parties using mixed bandwidth speeds

Pre-scheduled conferences are automatically setup before participants arrive. The system is covered by a 24 hour/day maintenance and support agreement.
